

MIRAFI®

Mirafi® Mirascape Weed Barrier, Soil Separator, Light Drainage

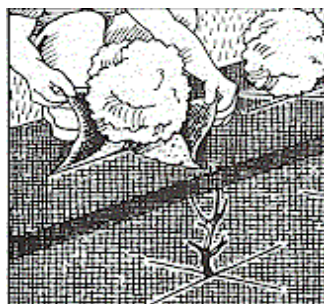

Mirafi Construction Products offers a wide range of woven and nonwoven geotextiles for transportation, marine, environmental and architectural applications. These fabrics are cost-effective elements which improve and enhance modern construction techniques in a variety of applications.

PRODUCT DESCRIPTION

Mirafi Mirascape is a needle-punched, heat bonded nonwoven polypropylene landscape fabric. Mirascape has an earthtone color to most closely represent the widest range of soil colors. It is designed specifically to act as a weed barrier, soil separator and light drainage filter. Mirascape is inert to biological degradation and resistant to naturally encountered chemicals, alkalis and acids.

FEATURES AND BENEFITS

- Provides excellent water permeability.
- Inhibits existing weed growth while suppressing new weed growth.
- Permits passage of air and liquids, including fertilizers.
- Prevents "souring" of soil beds associated with impermeable plastic sheets.
- Remains in place and will not rot, mildew, become brittle or biologically decompose.
- Resists UV rays and temperature extremes.
- Resists acids, alkalines, common herbicides, insecticides and fertilizers.
- Resists tearing and puncture, but can easily be cut to fit any shape using common household scissors for installation.
- High friction surface controls migration of common mulches.

APPLICATIONS

- Urban medians
- Sidewalk landscaping
- Residential landscaping
- Commercial properties

INSTALLATION GUIDELINES*

Mirafi Mirascape can be installed prior to new planting or easily retrofitted to existing landscape. Mirascape should be covered with mulch as soon as possible after installation to prevent displacement by wind.

Mirascape is available in easy-to-handle, lightweight rolls, and requires only simple tools and household scissors for installation.

Mirascape is easily rolled over installation area. Ground surface should be free from sharp objects, large rocks, trash, or other debris.

Cross-shaped cuts are made in the fabric and plant material is put in place underneath. Mirascape ends should be buried a minimum of 3", and edges overlapped the same.

* These guidelines serve as a general basis for installation. Detailed instructions are available from your Mirafi representative.
